EXPERIMENT

Title

NUMBER OF COMBINATIONS LEADING TO A PRODUCT

Description

Problem Statement:

You are given an array `arr` and a product `m`. Your task is to find the number of possible unique triplets whose product of elements is `m`.

Input Format:

- The first line contains the integer, `n`
- The second line contains space separated integers of the array, `arr`
- The third line contains the product `m`.

The input will be read from the STDIN by the candidate

Output Format:

The output consists of a single integer, i.e. the count of unique triplets having product `m`.

The output will be matched to the candidate's output printed on the STDOUT

Example:

Input:

7

5 3 20 10 1 4 2

60

Output:

3

Explanation:

Product `m`:60

Possible triplets for product `m`: (5,4,3),(20,3,1), (10,3,2)

The count of unique triplets is 3.

Source Code:

```
n=int(input())
lst=list(map(int, input().split()))
lst.sort()
a,b = lst[-1], lst[-2]
avg=(a+b)/2
for i in range(n):
    if lst[i]
```
